Francesco Innocenti

Oxford, UK
Website: francesco-innocenti
francesco.innocenti@ndcn.ox.ac.uk

My research has mainly focused on understanding the training dynamics and scaling behaviour of artificial and biological neural networks. I like to understand things through the lens of optimisation theory, and am broadly interested in energy-based models, time-series forecasting, and computation through dynamics.

Experience

Nov 2025 - present **Postdoctoral Researcher**, *University of Oxford*, UK.
- Researching the scaling and optimisation dynamics of brain-inspired learning algorithms.

Oct 2025 **Visiting Researcher**, *UM6P*, Morocco.
- Investigated stable (μP-like) parameterisations for Mixture of Experts LLMs.

Oct 2023 - Apr 2024 **Applied Scientist Intern**, *Amazon*, Barcelona.
- Helped improve and evaluate a short-term forecast of Amazon packages delivered throughout Europe, contributing to an internal conference paper and $MM savings in operational costs.

Education

Sept 2021 - 2025 **PhD, Machine Learning & Theoretical Neuroscience**, *University of Sussex*, UK.
- Thesis: "Towards Scaling Deep Neural Networks with Predictive Coding: Theory and Practice".
- Teaching Assistant on "Fundamentals of ML" MSc course.

Sept 2018 - Jun 2021 **BSc, Psychology with Cognitive Neuroscience**, *Goldsmiths, University of London*.
- 1st Class Honours (with highest degree performance).
- Thesis: "Modelling the Evolution of Visual Perception with Evolutionary Algorithms".

Open-source contributions

- Developed JPC (★ 86), a JAX library for training neural networks with predictive coding.
- Maintaining a repository of papers on the Maximal Update Parameterisation (μP) (★ 3).
- Curated repositories of papers on Neuro-AI (★ 58) and the Hessian of neural networks (★ 4).

Skills

Coding: Python (highly experienced), git (highly experienced), AWS (experienced).

Autodiff.: PyTorch and JAX (both highly experienced).

Languages: English (proficient), Italian (native), Spanish (fluent).

Selected papers

[1] **Innocenti, F.**, Achour, E. M., and Bogacz, R. (2026). On the Infinite Width and Depth Limits of Predictive Coding Networks. *43rd International Conference on Machine Learning (ICML).*

[2] **Innocenti, F.**, and Achour, E. M. (2025). A Simple Generalisation of the Implicit Dynamics of In-Context Learning. *NeurIPS Workshop on What Can('t) Transformers Do?.*

[3] **Innocenti, F.**, Achour, E. M., and Buckley, C. L. (2025). μPC: Scaling Predictive Coding to 100+ Layer Networks. *Advances in Neural Information Processing Systems 38.*

Selected awards

- Recognised as "Gold Reviewer" at ICML 2026.
- $25,000 in Google Cloud credits awarded by the Google TPU Research Cloud programme (2026).
- Best Paper Award at the ICML 2023 Workshop on Localized Learning.
